DETAILED ACTION

Response to Arguments

Applicant's arguments filed 11/8/2004 with regard to claim 5 have been fully considered but they are not persuasive.

Re claim 5, Applicant states (Amendment, page 10) that it is not well known in the art to include a memory field in an invalid image field and it is requested to provide evidence to prove the contrary. Saito (US 5,729,288) states that it is well known to store dark current data in a ROM and subtract the stored dark current data from image data in order to eliminate fixed pattern noise (col. 1, lines 18-51). Therefore, an invalid image field (dark current) is stored in a memory (ROM).

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: "Solid Image Capturing Device, Lens Unit and Image Capturing Apparatus including an Optical Mask for Storing Characteristic Data".

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 5 rejected under 35 U.S.C. 103(a) as being unpatentable over Oda US 5,608,455.

Re claim 5, Oda teaches a device for subtracting dark current from a video signal. The dark current is generated by covering an outside field of an effective image field with an optical mask. Oda does not expressly disclose a non-optical means for storing the characteristic data. Official Notice is taken that it is well known in the art to utilize rewritable memories for storing dark current. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Oda's teachings by implementing a non-optical storage means in the memory field in order to store dark current data.

Allowable Subject Matter

Claims 1, 3, and 6-13 allowed.

The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fail to anticipate or render obvious the following technical features as recited in the highlighted claims:

Referring to claims 1, 3 and 6-13, the prior art fails to teach or suggest " A solid image capturing apparatus comprising: ... said solid image capturing device includes an optical mask covering said invalid image field; and said optical mask includes a memory field which optically stores said characteristic data".

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the

Art Unit: 2612

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
